

I oppose RM-10870. I believe that providing operators with some level of proficiency in "CW" or Morse Code operation is a significant benefit of the amateur service. In emergency situations, CW may be the only method available for communications. Building a CW transmitter and receiver is possible with few parts and a little experience. Retaining some code requirement will assure that there will be some (and I think many) operators with the ability to do so. Thank you for your consideration
